0. Information for the respondent

The questionnaire is prefilled with ARIB data on sowing area received by the beginning of October.	
If the entity uses the electronic field book in e-ARIB, the data on harvested areas and total production are also prefilled based on those records. Please correct the prefilled fields where necessary.	
The easiest way to fill in the questionnaire is table by table, saving, checking and correcting errors in the tables.	
The availability of prefilling in a table is indicated by the darker background colour of the letters (B; C; D etc.) on the menu bar with letters.	
If you have saved a questionnaire that is not prefilled but still wish to use prefilling, you must first cancel the questionnaire by clicking “Cancel questionnaire".	
When reporting production, the estimated weight of the total production is sufficient. Data can be reported to 2 decimal places.	
When you have filled in a table and want to check this table, click “Save” and then select “Validate table”. This way, it is easier to correct errors in the specific table.	
If you click “Check”, the entire questionnaire is checked and the errors in all tables are displayed simultaneously. Use this button when you have filled in all the tables.	
The error message “Warning” indicates possible errors. Please make sure that you have entered the correct data, then click “Accept warnings” and confirm the questionnaire.	
In the absence of values, you do not have to enter 0 (zero) in the fields.	
In case of any questions, please call +372 6259 300 or send an email at mailto:klienditugi@stat.ee

The clarifying explanation for production (column 4) is only filled in, if the respective crop has been grown but the total production (column 3) is 0 or if the yield is higher or lower than normally.
